Continuation of 11. does NOT place the application in condition for allowance because: Applicant's arguments have been fully considered but they have not been found to be persuasive. Applicant argues that Yamada in view of Seki does not anticipate, or in the alternative, render obvious the claimed invention because Yamada does not specifically teach the formation of a polymer in the vessel comprising the ethylenically unsaturated monomer wherein the unsaturated monomer comprises cellular material and/or components of the fermentation broth. However, although this element is not specifically taught by the reference, Seki provides the teaching that a solution of an ethylenically unsaturated monomer such as acrylamide is likely to polymerize under many conditions. Although, as applicant argues, no polymerization may occur in the method of Yamada, such polymerization is likely to occur by the course of routine experimentation, as taught by Seki. Although applicant argues that no such modifications which may result in polymerization are taught in the references, such modifications are present. For example, Yamada teaches a modification of the method wherein iron is added to the medium (col. 9), which may result in a polymerization, as discussed by Seki. One would have been motivated to modify the teachings of Yamada in the course of experimentation to develop improved enzyme activity, as discussed by Yamada. Thus, in the least, the cited teachings render obvious the claimed invention. Applicant's argument is therefore not found to be persuasive.
